

# Connect homes to fiber faster than ever

**Explore the innovative two-step-approach of RESA CC.** Connect rural homes to fiber with our plug-in solution.

The **RESA CC (Compact Closure)** enables you to plan, manage and simplify the Fiber-to-the-Home rollout by installing all 'homes passed plus' infrastructure in one go. Subscribers can then choose when to finalise their individual installation at their convenience, through plug-in connectivity for 'homes connected'.

# RESA CC

Serve customers better

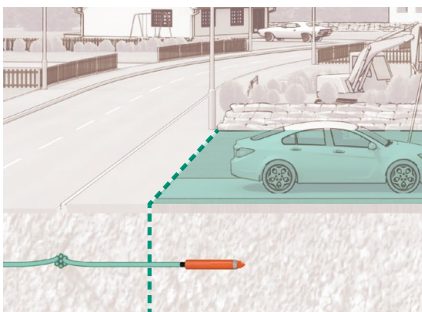

1) Homes passed plus

2) Homes connected

## How it works

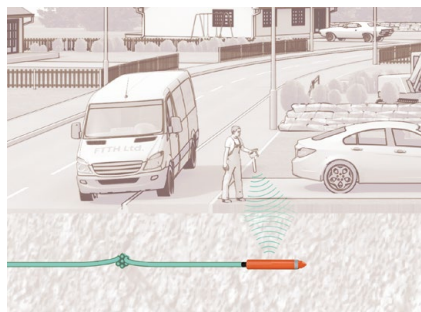

The RESA solution is split into two different steps: 'homes passed plus' and 'homes connected'. In the first phase, the carrier pre-installs the RESA CC underground. In the second phase, subscribers coordinate the installation of the last few meters within the boundaries of their own property themselves: Locating the RESA CC and connecting it to the building entry point (RESA BEP).

### 1) Homes passed plus

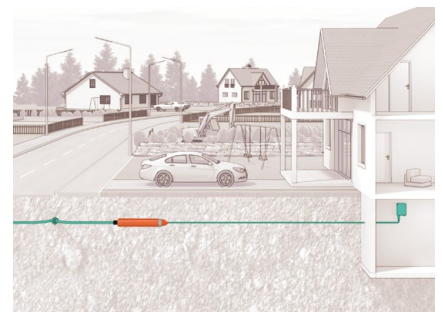

Deploy the fiber on the property edge.

### 2) Subscriber is ready

Locate RESA CC underground.

Dig, plug-in and go.
